

Trade-Crypto Structural Isomorphism (Theorem 4)

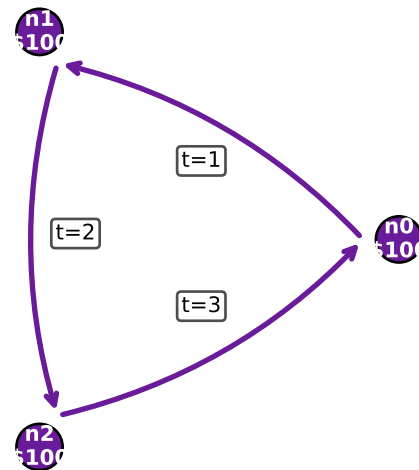

Trade round-trip
(months, ~\$100k)

A→B (export)
B→C (re-export)
C→A (re-import)

↔ time rescaling
 $\tau(t) = \lfloor t/\alpha \rfloor$
 $\varepsilon' = O(\alpha \cdot \sigma_{\text{fee}})$

Crypto laundering
(days, $\pm 2\%$ mixer fee)

A→mixer (deposit)
mixer→B (exit)
B→A (return)
